ProCard
Virtual Cards &
Digital Wallets

ProCard Virtual Card Management System is a full turnkey solution to manage virtual cards, from issuing to accepting the virtual card transactions

ProCard The solution allows the bank to transform physical cards to virtual cards allowing payments using digital wallets that add security and convenience

In a world where online frauds and cyberattacks constantly create hurdles in the adoption of digital payments, virtualisation is set to add an extra layer of security to user's sensitive data, thus preventing online and digital data breaches.

Digital wallets are quickly becoming the primary payment method for online and in person purchases. Virtual Cards are a safer way to pay online or in-app. When you use a virtual card to make a purchase, the app replaces your physical card number with a unique virtual card number. At the time of payment, the virtual number hides your personal payment details and helps to protect against fraud.

Digital Wallets reduce risk and PCI compliance costs

Benefits:

- Store a virtual version of your card on your smartphone

- No need to key in your card number or CVV2 for each purchase

- Phones are with us at all times, and with a digital wallet, our cards and banking details are with you too

- Addresses data privacy & PCI DSS compliance

- Increase customer confidence and increase approval rates

- Enhanced security prevents hackers or any other unwanted third parties from accessing your cards

- Delete or reactivate your virtual cards at any time

- Virtual cards hide your actual card number, helping to keep it safe from fraud

- Pay in a few taps - no need to grab your wallet

Compliance
Addresses general as well as PCI DSS compliance.

No Changes
The solution can be deployed without making any changes to existing infrastructure.

Secure & Fast Deployment
ProCard can be deployed on a fast-track basis.
